

ABSTRACT OF THE DISCLOSURE

An object of the present invention is to provide a stamper preform and others capable of obviating an Ni electroforming step taking a long time and readily producing a defective in production of a stamper and capable of forming an accurate and fine pattern of projections and indentations. A stamper preform 11 of the present invention has a base 1, a semi-crosslinked resist layer 2, and a prebaked resist layer 3 stacked in this order. The prebaked resist layer 3 contains a methoxymethyl melamine and bumps are readily formed therein by exposure and development (Fig. 1C).
